Personal SWOT Analysis Worksheet

- For instructions on using Personal SWOT Analysis, visit www.mindtools.com/personalswot.

Strengths	Weaknesses
What do you do well? What unique resources can you draw on? What do others see as your strengths?	What could you improve? Where do you have fewer resources than others? What are others likely to see as weaknesses?
I tend to do well at looking a problem, thinking critically and logically, and coming up with a solution. I have a few strong mentorship figures that I am able to meet with to further my growth in both personal and career roles. I have been told that I am patient, responsible, and reflective.	First I want to improve on my ability to respond with a decision when the situation requires it, as it can take me a while to decide different things. Second, I want to be better at branching out of my comfort zone. I think that I am young and lack diverse experiences, which has opened less doors for me in some areas. I tend to be more quiet and reflective, which others can see as disinterested or unopinionated.
Opportunities	Threats
What opportunities are open to you? What trends could you take advantage of? How can you turn your strengths into opportunities?	What threats could harm you? What is your competition doing? What threats do your weaknesses expose you to?
I have a brother who is in a similar field so I have the opportunity to work with him on different projects and I have the opportunity to continue to learn different trades and skills as long as I continue to go to school. The trend of software development rising and bootcamps becoming more and more accepted is a trend that I am hoping to take advantage of. I am able to take advantage of my patience and logical thinking to tackle problems that arise in an efficient manner and I can use my mentorship connections to further my networking and personal growth.	Currently, the pandemic tends to cut the employment rate at different companies and more and more people tend to learn coding, meaning that the job market is becoming more difficult. My competition would be getting more experience in different potential coding languages as well as job experience. I believe that my weakness could keep me from being quick enough to make a job decision or from being able to make the right networking connections at the right time.
